TITLE : FUEL OIL SUPPLYING DEVICE FOR
FUEL TANK

ABSTRACT : PROBLEM TO BE SOLVED: To provide a fuel oil supplying device 10 for a fuel tank by molding an inlet pipe IP with resin and further enable a high sealability to be attained.

SOLUTION: An inlet pipe IP is formed by first resin material. A casing main body 20 is formed by second resin material which is different from the first resin material and has a seat surface 24b facing against a pouring passage. A cap main body 51 opens or closes a pouring passage Sp and has a seal ring 90 sit against the seat surface 24b for sealing the pouring passage Sp against external area. A sealing member 60 is present between the inlet pipe IP and the casing main body 20. An inner circumferential side of the sealing member 60 is integrally formed against the casing main body 20 through an insert molding operation and an outer circumferential side of the sealing member 60 is integrally formed with the inlet pipe IP through hot melting operation.
